Introduction and Background

The planning of this curriculum document for training in orthodontic subjects began in 1994 when it became necessary for the development of a national plan for structured training following the Calman Report and the first Chief Dental Officer’s Report.

In November 1995 the Curriculum Working Party of the SAC produced a curriculum together with Aims, Objectives, Content, Learning Outcomes and Assessments leading to the Membership examinations of the Royal Colleges (MOrth RCS) for all trainees in orthodontics. The curriculum was set out, in accordance with modern educational practice, in a modular format to assist teaching and assessment. In response to a request from the Specialist Dental Education Board of the General Dental Council in 2008, a new version has been produced to reflect the need for an outcome based curriculum which is indicative of the competencies required at the varying levels of training within the specialty together with the knowledge, skills and attitudes achieved by the trainee in acquiring those competencies. The extensive revision of the curriculum has been based on current thinking and the requirements for:

- Greater protection of the public by providing clear information as to the level of training achieved
- Improved access to specialist training by general practitioners
- Greater flexibility to training through the availability of both full and part-time training pathways
- Giving appropriate recognition for accredited prior learning
- Producing a competent workforce with the appropriate skills and knowledge necessary to meet the varying levels of treatment complexity, as well as considering the relative need and demand of potential patients.

1. Rationale

1.1 Purpose of the Curriculum

In developing the curriculum, the SAC have been mindful of the requirements to both protect the public and to train a competent workforce with the appropriate skills and knowledge necessary to meet the varying levels of treatment complexity, as well as considering the relative need and demand of potential patients.

The majority of patients in the current population of the United Kingdom have a treatment complexity that can be managed by a Specialist Orthodontist. The purpose of the 3 year curriculum is to enable trainees (StRs) in Orthodontics to achieve the level of competence expected in order to provide appropriate care for this group of patients normally treated in the primary care setting.

It is essential that the public have a clear understanding as to the level of training undertaken by an orthodontic practitioner and that the ‘specialist’ has the appropriate knowledge and skills to provide care for the needs of a specific patient group.

This curriculum is not intended to provide competence in the management of patients requiring more complex multidisciplinary medical and/or other dental specialty care. It is expected that ‘specialists’ providing such care would currently undertake an extended, additional period of training that equips them to deliver more complex maxillo-facial orthodontic treatments and associated services1. Both the
Specialist Dental Education Board and the GDC Education Committee appreciate the importance of a different, and more appropriate, quality assured training for those who wish to be competent in the management of these multidisciplinary patients. This will be considered further as part of the GDC’s Specialist List Review scheduled for 2011.

The requirement to train a separate specialist workforce with the different, yet appropriate, knowledge, skills and attitudes to manage this specific group of highly complex patients supports the agreed 18 week Commissioning Pathway\(^2\), which has been accepted by both the DoH and the British Orthodontic Society. The details of how the training to manage these separate groups of patients compares can be seen at Appendix 1 and also at the following link: http://www.rcseng.ac.uk/fds/jcptd/higher-specialist-training/higher-specialist-training-docs

The programmes include all the features of the European Erasmus training programme\(^3\) and fulfil the requirements of the directives of the Commission of the European Communities on Dental Education regarding the education of orthodontists\(^4\), the Advisory Committee on the training of Dental Practitioners\(^5\) and the World Federation of Orthodontists guidelines for postgraduate orthodontic education\(^6\).

The training programmes are founded on a training centre, normally comprising a university dental school and dental hospital together with other associated, recognised and validated training environments.

Completion of the 3 year specialist training programme is marked by the successful completion of one of the Membership examinations of the Royal Surgical Colleges (MOrth RCS). It is anticipated that a Tricolligate Membership examination will be developed in the near future.

All trainees on CCST training programmes will be required to achieve the same standards of competence and will hold National Training Numbers (NTNs) to enable monitoring of their training by the Postgraduate Deaneries in conjunction with the SAC. This is as defined in the Memorandum of Understanding between the GDC and members of the JCSTD (2008)\(^7\).

The 3 year full time programme (or its part time equivalent) will lead to a CCST in Orthodontics, subject to the satisfactory completion of the in-training assessments.

1.2 Curriculum development

The curriculum has been written, developed and modified by a working group of the SAC in Orthodontics; Professor Nigel Hunt (Chair), Professor Fraser McDonald (RCS England), Professor Jonathan Sandy (RCS Edinburgh) and Mr Jonathan Sandler (Consultant Group of BOS), in conjunction with the Lead Postgraduate Dean for Orthodontics (Mrs Elizabeth Jones). The curricula have subsequently been discussed and approved by the full SAC in Orthodontics which, in addition to the above, includes representatives from the Royal Colleges and the constituent groups of the British Orthodontic Society; Mr Stephen Rudge (Consultant Group), Mr Ivan Connolly (RCPS Glasgow), Dr Friedy Luther (University Teachers Group), Mr Chris Lowe (Orthodontic Specialists Group), Mr Mike Smith (Orthodontic Community Group) and Ms Sophia Wahla and Ms Sally Walker (Training Grades Group). The curricula have also been modified in the light of comments from a lay representative, Mr Robert Posner (Positive Communications).

The structure and curriculum has been presented to, and approved by, the Executive of the British Orthodontic Society (BOS), the Education Committee of the BOS as well as the Chairs of the BOS constituent groups, including the Training Grades Group. The curriculum has also been approved by the Education Committee of the GDC, the JCSTD/ JCPTD and the SDEB.

1.3 Context of training

Training and education should be systematically planned in both the clinical and academic environments. The educational contract should be structured and, in this context, training should take precedence over
service provision. Few hospitals and clinics can provide complete training and hospital departments are normally expected to link with University Dental Schools, primary care settings and other training environments to provide all aspects of teaching and training as appropriate. Educational plans should be co-ordinated so that the opportunities available in approved training environments can be linked to form an orthodontic training network. Training has been planned in modules linked to various generic and specialty specific topics.

In preparation for specialists undertaking and maintaining a modern evidence-based approach to orthodontic practice, achieved through continuing professional and personal development, it is expected that trainees have personal research training and experience. This experience is expected for all trainees and should be structured to the eventual career intentions of the trainee. The research component should fulfill the minimum M level requirements of the Quality Assurance Agency and may take the form of the satisfactory submission of a research dissertation (for example as part of an MSc, MClinDent, DDS or equivalent), and/or two papers in appropriately peer reviewed journals submitted on work undertaken during the training period. Academic trainees would normally be expected to spend time acquiring a PhD or other higher research qualification.

Trainees must be informed of assessment processes and the part played by Training Programme Directors, Postgraduate Deaneries, and the SAC in Orthodontics, the ABSTD, the JCPTD and the General Dental Council. Trainees should take part in local, regional and national educational events.

1.4 Entry Criteria

Fully registered dental graduates may apply for the specialty training programmes usually following, at least, 2 years foundation training or its equivalent, in a practice or hospital environment either within the UK or the European Union.

Entry is competitive and the possession of the MJDF/MFDS/FDS of the Royal Colleges (or their equivalent), whilst not essential, may be used as a marker of the completion of the foundation period. Similarly, candidates may consider it desirable to be in possession of the Part 1 MOrth examination, which covers applied science in relation to orthodontic practice, prior to commencing specialist training. This paper based examination can be taken at any time following basic dental qualification and is available to candidates from any country. An on-line version is currently being developed. Those candidates who have passed the Part 1 MOrth examination would gain exemption from the relevant academic modules of the curriculum (see Appendix 1). The selection panels will also be looking for evidence of motivation, commitment to the specialty, a logical career progression and continuing professional development.

A more flexible approach to entry to specialty training is being encouraged. Applicants who have successfully completed an approved training programme leading to the Diploma in Primary Care Orthodontics (DPCO) of the Faculty of General Dental Practice (UK) will be given appropriate exemption from those parts of the academic modules covered in the specialist training programmes as part of their academic accredited prior learning (see Appendix 1). It should be noted that in view of the longitudinal nature of orthodontic care, the clinical component of such ‘top-up’ training will still be undertaken over a minimum three year period.

All training posts in orthodontics should be advertised in the British Dental Journal in the first instance. Other advertisements, coordinated through the respective Deanery, may be undertaken depending upon local recruitment needs.
1.5. Duration of training

The training programme leading to the CCST in Orthodontics will be not less than 3 continuous years of full-time training or the equivalent part-time training (maximum time in training 6 years).

Locum experience would not normally be accepted as part of the 3 year programme.

1.5.1. Breaks in training

The longitudinal nature of orthodontic treatment provision means that an interruption in training may have a deleterious effect on the trainee’s knowledge and clinical skills acquisition. When there has been an absence from training in excess of three months, the Postgraduate Deanery must be notified and they, in conjunction with the SAC in Orthodontics, will determine a revision of the training period and the clinical programme that the trainee will be expected to complete on resumption of training.

1.5.2. Individual Needs: Flexible and Part-time Training

Flexible (Less than full time) Training over a more extended period for those with non-professional commitments or health issues can be arranged. Flexible trainees must complete the curriculum within a pro-rata training experience. Full-time trainees can apply through the Postgraduate Deaneries to become flexible trainees and flexible trainees can apply to revert to full-time training by arrangement and with the approval of the Postgraduate Dental Dean and the TPD. The interruptions in training noted above apply to all trainees irrespective of whether they are full-time, part-time or on a flexible programme.

Part-time programmes will be similar to flexible training schemes, and involve competitive entry. For those opting for a part-time training, the trainee must be flexible in the sessions worked per week over the training period in order to attend those aspects of additional teaching and training required to complete the appropriate curriculum.

The total length of flexible and part-time training should not be less than that of full-time training. Flexible and part-time programmes would normally be for a minimum of six sessions per week.

2. Content of Learning

2.1 Aims of Training

The trainee should acquire the appropriate knowledge, attitudes and skills of a Specialist Orthodontist. Trainees should possess a sense of professionalism, interest and enquiry. These characteristics should encourage the specialist to maintain competency throughout their career by the continuous pursuit of Continuing Professional Development.

2.2 Objectives of the 3 year programme

On completion of training the graduate will demonstrate the following aptitudes:

Generic Specialist Skills

- A professional and ethical approach to patient care.
- A professional attitude to all members of the dental team.
- A scientific attitude, an inquiring mind and the stimulation of professional curiosity.
- A thorough understanding of scientific methodology.
- An ability to interpret the relevant literature.
- An awareness of current legislation and working practices relating to the practice of dentistry.
- An ability to develop themselves by both reflective practice and self evaluation.
• An ability to teach (this includes all members of the dental team).
• An ability to promote and apply dental health education.

Orthodontic Specific Specialist Skills
• Diagnose anomalies of the dentition.
• Detect deviations in the development of the dentition, of facial growth and the possession of functional abnormalities.
• Evaluate the need for orthodontic treatment.
• Formulate a treatment plan and predict its course.
• Carry out interceptive orthodontic measures.
• Execute simple and complex treatment procedures.
• Evaluate orthodontic progress and treatment outcomes.
• Possess an overview of the multidisciplinary approach for the treatment of dentally and medically compromised patients.
• Be able to acquire and interpret research information and data.
• Be able to prepare oral and written clinical and research findings.

2.3 Section A - Generic Knowledge, Skills and Attitudes

Module 1 - Cell and Molecular Biology with Genetics
Module 2 - Embryology, growth and development of the face and jaws
Module 3 - Psychology
Module 4 - Research with ICT
Module 5 - Radiological Imaging Techniques
Module 6 - Oral Health
Module 7 - Dental Health Education
Module 8 - Health and Safety
Module 9 - Clinical Governance

2.4 Section B – Orthodontic Specialist Specific Knowledge, Skills and Attitudes

Module 10 - Normal and Abnormal Development of the Dentition
Module 11 - Temporomandibular Dysfunction and Orthodontics
Module 12 - Tooth Movement and Facial Orthopaedics
Module 13 - Orthodontic Materials and Biomechanics
Module 14 - Aetiology of Malocclusion
Module 15 - Airway, Craniofacial Development and Malocclusion
Module 16 - Diagnostic Procedures
Module 17 - Treatment Planning
Module 18 - Growth, Treatment Analysis and Cephalometry
Module 19 - Long-term Effects of Orthodontic Treatment
Module 20 - The Iatrogenic Effects of Orthodontic Treatment
Module 21 - Epidemiology in Orthodontics
Module 22 - Orthodontic Literature and Research
Module 23 - Removable Appliances
Module 24 - Functional Appliances
Module 25 - Extra-Oral Appliances
Module 26 - Fixed Appliances
Module 27 - Retention Appliances
Module 28 - Guiding the Development of the Occlusion
Module 29 - Adult Orthodontics
Module 30 - Orthodontics and Minor Oral Surgery
Module 31 - Orthodontics and Restorative Dentistry
Module 32 - Overview of Multidisciplinary Management of Facial Disharmony
Module 33 – Management
Module 34 – Teaching and communication
SECTION A - GENERIC KNOWLEDGE, SKILLS AND ATTITUDES
## MODULE 1-
**Cell and Molecular Biology**

# MODULE 3 - Psychology

This module is intended to provide information about and experience in:

- The psychological basis of patients at assessment, during orthodontic treatment planning and delivery and subsequent to treatment
- Describe normal psychological development from childhood to adulthood
- Describe normal and abnormal psychological development including disorders of personality
- Apply knowledge of psychological development to the assessment and orthodontic treatment of patients
- Recognize the importance and applies knowledge of psychology for normal and abnormal patient profiles

# MODULE 20 –
The iatrogenic effects of orthodontic treatment

<table>
<thead>
<tr>
<th>Objective</th>
<th>Knowledge</th>
<th>Skills</th>
<th>Attitudes</th>
<th>Teaching and Learning Methods</th>
<th>Assessments</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module is intended to provide information of the risks relevant to the assessment and treatment of patients and includes:</td>
<td>- Root resorption</td>
<td>- Communicate the risks of orthodontic treatment to a patient</td>
<td>- Recognize the importance of detailing risks in informed consent</td>
<td>- Attend trainee seminars / tutorials</td>
<td>- Written examination (SCR)</td>
</tr>
<tr>
<td></td>
<td>- Effects on the enamel</td>
<td>- Describe the clinical diagnosis of iatrogenic effects</td>
<td>- Independent study</td>
<td>- Web based e-learning sources</td>
<td>- OSCE</td>
</tr>
<tr>
<td></td>
<td>- Effects on the periodontium</td>
<td>- Manage orthodontic appliances to minimise iatrogenic affects</td>
<td>- Recognize the need for balance of the explanation of risks/benefits of treatment</td>
<td>- Attendance at suitable courses</td>
<td>- DOPS</td>
</tr>
<tr>
<td></td>
<td>- Effects on the pulp</td>
<td>- Justify the clinical protocols for minimising and treating the damage when identified</td>
<td></td>
<td>- Attendance at suitable meetings</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Adverse effects on dentofacial appearance</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Adverse effects on the soft tissues including headgear injuries and allergic reactions</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Influences on the temporo-mandibular joints</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## MODULE 21 – Epidemiology in orthodontics

<table>

### MODULE 24 – Functional appliances

<table>
<thead>
<tr>
<th>Objective</th>
<th>Knowledge</th>
<th>Skills</th>
<th>Attitudes</th>
<th>Teaching and Learning Methods</th>
<th>Assessments</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module is intended to provide information about and experience in:</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>- The scope and limitations of functional appliances</td>
<td>- Describe the indications and contraindications for the use of functional appliances</td>
<td>- Apply knowledge of the integration of functional with fixed appliances</td>
<td>- Recognize the importance of the timing of treatment with functional appliances</td>
<td>- Attend trainee seminars/lectures/tutorials</td>
<td>- Workplace based assessments</td>
</tr>
<tr>
<td></td>
<td>- Describe the design and construction of various types of functional appliance</td>
<td>- Design growth modification appliances appropriate for specific malocclusions</td>
<td>- Recognize the tooth movements achieved with functional appliances</td>
<td>- Independent study</td>
<td>- Written exam and/or viva (SCR)</td>
</tr>
<tr>
<td></td>
<td>- Explain the relative merits of different appliance designs</td>
<td></td>
<td></td>
<td>- Web based e-learning sources</td>
<td>- OSCE</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Attendance at suitable courses</td>
<td>- DOPS</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Attendance at suitable meetings</td>
<td>- Presentation of treated cases</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- Attendance at suitable clinics and provision of patient treatment</td>
<td></td>
</tr>
</tbody>
</table>
## MODULE 25 – Extra-oral appliances

<table>
<thead>
<tr>
<th>Objective</th>
<th>Knowledge</th>
<th>Skills</th>
<th>Attitudes</th>
<th>Teaching and Learning Methods</th>
<th>Assessments</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module is intended to provide information about and experience in:</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>- The use of extra-oral anchorage and traction</td>
<td>- Explain the Indications and contraindications for the use of extra-oral forces</td>
<td>- Apply the design, construction and management of appliances to deliver extra-oral forces</td>
<td>- Recognize the risks of treatment with extra-oral forces and procedures to limit those risks. The medico-legal implications of headgear treatment</td>
<td>- Attend trainee seminars / tutorials /lectures</td>
<td>- Workplace based assessments</td>
</tr>
<tr>
<td>- The timing of treatment with extra-oral forces</td>
<td>- Identify headgear safety</td>
<td>- Apply extra-oral forces to fixed, functional and removable appliances</td>
<td>- Attend clinical demonstrations</td>
<td>- Written exam and/or viva (SCR)</td>
<td></td>
</tr>
<tr>
<td>- Retraction and protraction headgears</td>
<td>- Describe directional forces used in extra-oral traction. The use of cervical, horizontal and high pull headgear and protraction headgear</td>
<td>- Interpret the literature with regard to treatment / management of patients with headgear</td>
<td>- Independent study</td>
<td>- OSCE</td>
<td></td>
</tr>
<tr>
<td>- Force levels and direction/ duration of force</td>
<td></td>
<td></td>
<td>- Attendance at suitable courses</td>
<td>- DOPS</td>
<td></td>
</tr>
</tbody>
</table>

- Attend trainee seminars / tutorials /lectures
- Written exam and/or viva (SCR)
- Independent study
- Attendance at suitable courses
- Attendance at suitable clinics and provision of patient treatment
- Presentation of treated cases
## MODULE 26 – Fixed appliances

<table>
<thead>
<tr>
<th>Objective</th>
<th>Knowledge</th>
<th>Skills</th>
<th>Attitudes</th>
<th>Teaching and Learning Methods</th>
<th>Assessments</th>
</tr>
</thead>
<tbody>
<tr>
<td>This module is intended to provide information about and experience in:</td>
<td>• State the design, manufacture and construction of fixed orthodontic appliances</td>
<td>• Select, fits and manages fixed appliance systems appropriate to the treatment of specific malocclusions</td>
<td>• Recognize the appropriateness of fixed appliances for the treatment of specific malocclusions</td>
<td>• Attend typodont courses</td>
<td>• Workplace based assessments</td>
</tr>
<tr>
<td>• The scope and limitations of fixed orthodontic appliances</td>
<td>• Describe the various types of fixed orthodontic appliances</td>
<td>• Interpret the literature with regard to bracket system choice</td>
<td>• Attend trainee seminars / tutorials</td>
<td>• Written exam and/or viva (SCR)</td>
<td></td>
</tr>
<tr>
<td>• Indications and contraindications for their use</td>
<td>• Describe the types of pre-adjusted edgewise appliances and prescriptions</td>
<td></td>
<td>• Independent study</td>
<td>• OSCE</td>
<td></td>
</tr>
<tr>
<td>• The placement, bonding and cementation of fixed orthodontic appliances</td>
<td>• Outline other appliance systems including Tip-Edge and self-ligating bracket systems</td>
<td></td>
<td>• Attendance at suitable courses</td>
<td>• DOPS</td>
<td></td>
</tr>
<tr>
<td>• Anchorage planning and control in fixed orthodontic appliance therapy</td>
<td>• Describe intra-oral auxiliaries, temporary anchorage devices and expansion appliances</td>
<td></td>
<td>• Attendance at suitable meetings</td>
<td>• Presentation of treated cases</td>
<td></td>
</tr>
<tr>
<td>• The use of ligatures and elastics</td>
<td></td>
<td></td>
<td>• Attendance at suitable clinics and provision of patient treatment</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
# MODULE 27 – Retention appliances

<table>

## MODULE 33 – Management

### Objective

This module is intended to provide information relating to:

- Personnel management
- Financial management
- Responsibilities and professionalism of a Specialist practitioner

### Knowledge

With relevance to dental/specialist practice:

- Outline employment law (including equality and diversity)
- Outline the management of staff
- Explain staff development procedures
- Outline staff disciplinary procedures
- Explain tax and financial record keeping
- Describe indemnity related to the practice environment
- State the requirements for patient record keeping

### Skills

- Demonstrate interpersonal skills required to support a team for delivery of care

### Attitudes

- Recognize the legal framework within which staff are employed
- Recognize the importance of good record keeping
- Recognize the importance of staff engagement and support

### Teaching and Learning Methods

- Attend trainee seminars
- Independent study
- Web based e-learning sources
- Attendance at suitable courses
- Attendance at suitable meetings
- Attend small group discussions / journal clubs

### Assessment

- Workplace based assessments
- OSCE
- DOPS

2.5 Sequencing of Learning and Experience

The specialist training programmes commence with a laboratory based practical course (‘typodont’) for the development of orthodontic skills appropriate to the clinical situation. Trainees must demonstrate sufficient knowledge and skill before beginning clinical procedures on patients.

Whilst individual deanery programmes of study may vary the exact sequence of delivery of both the generic and specialist modules, the majority of the academic based modules will normally be completed within the first two years of the 3 year programme. Postgraduate deaneries will be informed as to which work based assessments should be completed as part of the ARCP process.

Where a university degree is being incorporated into the training, the dissertation may be completed at the end of either the second or third year depending upon the degree specification and local university regulations. For those academic trainees who are undertaking a PhD, the thesis would normally be submitted in year 4 or 5.

Clinical experiential learning through treatment of patients and by attendance at diagnostic and review clinics is embedded throughout all years of the programmes.

2.6 Methods of Assessment

An assessment blueprint exercise has been undertaken which maps appropriate assessment methods to the curriculum in a systematic manner and covers the domains of knowledge, skills and attitudes. Assessments are both formative and summative.

Continuing work-place based assessments including tests of knowledge, clinical and practical skills will be undertaken by each training centre for orthodontics. These may include miniCEX (clinical examination exercises), DOPS (direct observation of procedural skills) and MSF (multiple source feedback). Normally, trainees will be required to provide written reports reflecting on and describing their specific learning objectives in terms of patients for whom they have been responsible. Where appropriate, written assignments may be undertaken and if the training is linked to an associated taught course university higher degree; these may also form part of summative assessments for that degree.

In assigning methods of assessment to individual modules in the tables above (sections 2.4 to 2.6), the assessment includes not only those which may be undertaken within the training department(s) but also how those components of the curriculum are assessed in the Membership (MOrth). It is not intended that each component of the curriculum is assessed by each method. The assessment methods are indicative of the methods that may be used for each subject area, and should be applied as appropriate to the stage of training and circumstances of the training environment.

The examinations for the Membership of Orthodontics (MOrth RCS) are mapped to the appropriate curriculum and are taken towards the end of 3 years of full-time equivalent training.

The Membership examination of the joint Colleges (RCS England and RCPS Glasgow) includes; a written component (Multiple Choice Questions and Multiple Short Answers), tests of Structured Clinical Reasoning, Observed Structured Clinical Examinations (including test of communication skills) and the presentation of selected treated cases. The Membership examination of the Edinburgh Royal College comprises; MSAs, presentation of selected treated cases, SCR exercises, a communication exercise and a structured viva. Both examinations have been subjected to a blueprinting exercise which has mapped the assessment method to individual component of the curriculum. Both examinations are subject to a question validation exercise.
Overall progress will require a satisfactory evaluation report for each trainee including reflection on educational objectives. This is currently undertaken within the ARCP process conducted by the Postgraduate Dental Deaneries.

3. Model of Learning

3.1 How learning will be achieved

Clinical training must include; assessing new and review patients, examination, investigation, diagnosis and treatment planning, as well as the personal treatment of patients, which itself would normally occupy 50% of a trainee’s time.

In addition to work-based experiential learning, all trainees must have access to formal teaching, lectures, staff-led seminars, tutorials and research supervision. The formal training modules map to the agreed national training modules which are available as web-based learning through the British Orthodontic Society. Additional training opportunities will include clinical meetings, student-led seminars (‘Journal Clubs’ or similar) and participation in audit (both self-directed and departmental meetings).

Due to the diversity of local clinical and academic networks, arrangements for aspects of training will vary. It should be noted that the achievement of learning within an appropriate setting, is dependent upon close cooperation between the Postgraduate Deaneries, the Training Programme Directors and the SAC. It is likely that this will involve time at a Dental Teaching Hospital, Regional Hospital units and Primary Care clinics.

In addition, the trainee should be able to attend national (and if appropriate international) training opportunities for the delivery of external teaching in discussion with their educational supervisor.

Throughout their training period, trainees should have time for independent study, including reading recommended texts, journals and using computer searches to access appropriate material on the internet.

3.2 Distribution of time within the training programme

3.2.1. The 3 year programme

The full-time trainee should spend at least 6 sessions per week involved in patient contact, with at least 5 of these sessions devoted to supervised personal treatment of patients. A balanced programme should include personal treatment, diagnostic sessions, review clinics, formal and informal teaching, research and reading time. Part-time training, or less than full time training, should be based on a minimum of 6 sessions per week and include at least 3 personal treatment sessions.

Table 1: The table below gives details of training times and clinical sessional distribution:

<table>
<thead>
<tr>
<th>Trainee</th>
<th>Training time (years)</th>
<th>Weekly sessions</th>
<th>Total clinical sessions</th>
<th>Personal treatment</th>
<th>Other – diagnostics, review clinics etc</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full-time trainee</td>
<td>3</td>
<td>10</td>
<td>6</td>
<td>5</td>
<td>1</td>
</tr>
</tbody>
</table>
Table 2: The table below gives the sessional distribution within non-clinical sessions:

<table>
<thead>
<tr>
<th>Trainee</th>
<th>Total sessions</th>
<th>Total clinical sessions</th>
<th>Total non-clinical sessions</th>
<th>Non-clinical being taught</th>
<th>Non-clinical research, study, audit</th>
<th>Non-clinical management, administration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full-time trainee</td>
<td>10</td>
<td>6</td>
<td>4</td>
<td>1.5</td>
<td>2</td>
<td>0.5</td>
</tr>
</tbody>
</table>

The time devoted to the research component and how those sessions are dispersed over two or three years of the programme will depend on degree specifications and individual university regulations. The number of research dedicated sessions, on average, should not normally exceed two per week for master’s level degrees but this should be revised in the light of local university regulations for other higher degrees.

The time devoted to the research component and how those sessions are dispersed over two or three years of the programme will depend on degree specifications and individual university regulations. The number of research dedicated sessions, on average, should not normally exceed two per week for Master’s level degrees but this should be revised in the light of local university regulations for other higher degrees.

3.3 Clinical Experience and Caseload

The objective of the training programmes is to equip the trainee, at the end of the training period, with the knowledge, skills, attitudes and competence to provide the services of a specialist Orthodontist normally practising in a Primary Care setting. This objective should, in part, be met by having sufficient clinical experience to ensure that the development of these characteristics is both realistic and achievable within the work-based experiential environment. Whilst individual trainees will vary in their ability and progress in developing and achieving the appropriate knowledge, skills and attitudes, the following is a guide as to the anticipated patient caseload.

A total of 80 to 120 cases would be appropriate. A guide figure of 65 to 90 cases treated using a primary appliance system, 10 to 20 additional cases employing growth modification, and 5 to 10 cases involving a minor element of interdisciplinary care might be anticipated.

Case loads should be modified pro rata for part time trainees. It is not intended that the figures should be prescriptive but rather to be helpful as guidelines. All trainees would be expected to keep a logbook of their caseload, which should be reviewed as part of the ARCP process.

3.4 Out of Programme Training

In view of the longitudinal nature of orthodontic care, it is important that, whenever possible, trainees do not take time out of training for extended periods. It would be unusual, therefore, for trainees to take periods of detachment from training programmes, for training in other centres, either abroad or in the UK.
4. Learning Experiences

It is important that trainees are exposed to the clinical and academic views of more than one trainer, and this would normally occur through the training units being part of managed clinical and academic networks. The location of sessions will vary between training programmes and the Deaneries will be responsible for quality managing the appropriate location for training depending upon the local situation. However, it would normally be expected that the majority of sessions in the first year of training are in the university dental school together with associated secondary care environments. These could be the dental teaching hospital or regional unit.

For trainees on this programme, some clinical sessions may be held in primary care settings in the second and third years. Overall, a balanced approach should be presented such that the trainee has a solid core of knowledge against which to make evidence based judgements and gain perspectives of the range and effectiveness of contemporary orthodontic therapy as well as combined medical, surgical and dental care where appropriate.

Equally, it is important that trainees must not feel isolated and it is essential that there must be access to peer interaction with colleagues. This is especially important where training is provided away from the secondary care or university dental hospital setting.

Programmed sessions must be available for study and personal reflection, in addition to sessions devoted to research and to the development of teaching skills.

4.1 Training Capacity of the Programme

In a centre with adequate physical and human resources to support training, capacity is limited principally by the staff: student ratio. In accordance with the European Erasmus report guidelines any programme which exceeds two or more of the following guidelines may be seen as exceeding its resources to deliver an acceptable quality of training. This is especially important where the demands of non-CCST orthodontic students or trainees may dilute the potential for teaching and training.

- Clinical experiential training: In many Regional Hospital units and Primary Care settings chairside teaching usually approaches a 1:1 ratio. In Dental Hospitals there may be more students per member of staff. The absolute maximum should be a ratio of 1:6.
- Didactic teaching: It is beneficial for student interaction that groups should not be smaller than 3 but that there should be a maximum size of 8 for seminar/ tutorial based teaching. Larger groups are acceptable for a lecture format.
- Research degree dissertation: depending upon other commitments it is suggested that a supervisor should undertake supervision of no more than 5 projects at any one time. Individual university programmes may have local regulations in place.

5. Supervision of Trainees and Feedback

5.1 Educational Support

Close supervision of the trainee is essential to ensure appropriate educational support as well as patient and trainee safety. Each clinical session involving patient contact must have a designated supervisor available, with committed time devoted to the trainee.
All trainees will have an educational supervisor or trainer and each training centre or group of programmes will have a Training Programme Director (TPD) appointed by the Postgraduate Deanery. The TPD is responsible for the organisation and day to day management of the training programme. In addition, trainees are normally expected to have access to a tutor for pastoral care. Where the training programme is linked to a university dental hospital and school, the tutor is usually provided from that setting.

Informal appraisals by the trainer should be undertaken throughout the training period in order to monitor and advise on a trainee’s progress and training needs. A confidential record between the trainer and trainee should be kept of these meetings, which should occur at least twice a year. A formal appraisal must be held towards the end of each year of training or as appropriate. These appraisals should precede and inform the Deanery ARCP review process.

All assessments must be supported by structured feedback for trainees. Trainees who are unable to achieve the appropriate standard in an assessment or examination may, with the agreement of their trainers and TPD, repeat that examination or assessment but they need to be aware of, and comply with, local and national examination regulations. Counselling is an important component of trainee care and access must be provided for educational support. Early identification of trainees unsuitable for a career in orthodontics or experiencing difficulty with training is essential, in order to provide appropriate support and guidance. Normally, this should be within the first six months of the programme.

5.2. Trainer and Supervisors’ Training

The quality and ability of the trainers is an important element in successful training. Trainers must possess appropriate experience, commitment, knowledge and skill as demonstrated, where appropriate, by accredited Clinical Teacher status, ideally including membership of a Higher Education Academy.

All trainers and supervisors must undertake Continuing Professional Development and Audit and be part of a managed clinical teaching network. It is expected that trainers will be in possession of a teaching certificate or equivalent, and engage in a teaching and learning programme depending on local arrangements.

6. Managing Curriculum Implementation

The Postgraduate Deaneries are responsible for quality management of the training programme. The SDEB will quality assure the Deaneries and the educational providers are responsible for local quality control, managed by the Deaneries.

As the actual content of the 3 year curriculum essentially follows that of the previous revision, subject to minor variations, implementation should be relatively seamless. Once approved, it is anticipated that trainees commencing their training in 2011 will follow this amended version of the curriculum. The Deaneries will ensure that the sites for delivery of the curriculum are appropriate and fit for purpose, and, with regard to training in primary care setting, pilot schemes are currently being investigated. It is essential that changes to the delivery of the programme are not made until positive outcomes have been demonstrated from such pilot schemes following appropriate evaluation. The exit examination for the 3 year training in the specialty of Orthodontics is the MOrth RCS. At present, trainees can sit either the joint bicollegiate examination of the RCS England and RCPS Glasgow, or the separate MOrth examination offered by the RCS Edinburgh. The curriculum is common for both examinations. In due course a tricollegiate examination is expected to evolve.
7. Curriculum review and update

The SAC will continue to ensure that the curriculum is fit for purpose in that it provides the trainee with the appropriate knowledge, skills, attitudes and competencies required to meet the requirements of a specialist orthodontic workforce normally delivering specialist orthodontic care in the primary care setting. Curriculum review will be informed by a number of different processes and information may be gathered from sources which might include; the Lead Postgraduate Dean for Orthodontics, Training Programme Directors and Educational Supervisors, University leads, the trainees, the BOS and representatives of the Department of Health. This list is not exhaustive. Any suggested updates will only be made following appropriate consultation with stakeholders, including trainees and lay members. Updates must be approved by the JCPTD before passing to the GDC for consideration.

At the date of this document, both the SAC and the JCPTD have expressed their concern to the GDC that the additional post-CCST training to provide competence in the management of more complex multidisciplinary cases is currently outwith the quality assurance process. A proposal for a revised, seamless 5 year training programme leading to a separate CCST has been drafted and will be considered as part of the GDC’s review of Specialist Lists in 2011. Depending upon the outcome of that review further amendments to the current 3 year training programme may need to be considered.

8. Equality and diversity

8.1- Statutory responsibilities

The SAC is committed to the principle of diversity and equality in employment, membership, academic activities, examinations and training. As part of this commitment we are concerned to inspire and support all those who work with us directly and indirectly. Integral to our approach is the emphasis we place on our belief that everyone should be treated in a fair, open and honest manner. Our approach is a comprehensive one and reflects all areas of diversity, recognising the value of each individual. We aim to ensure that no one is treated less favourably than another on the grounds of ethnic origin, nationality, age, disability, gender, sexual orientation, race or religion. Our intention is to reflect not only the letter but also the spirit of equality legislation.

Our policy will take account of current equality legislation and good practice. Key legislation includes:

- The Race Relations Act 1976 and the Race Relations Amendment Act (RRAA) 2000
- The Disability Discrimination Act 1995 and subsequent amendments
- The Sex Discrimination Act 1975 and 1986 and the 1983 and 1986 Regulations
- The Human Rights Act 1998
- The Employment and Equality (Sexual Orientation) Regulations 2003
- The Employment and Equality (Religion or Belief) Regulations 2003
- Gender Recognition Act 2004
- The Employment Equality (Age) Regulations 2006

## Associated medical and dental anomalies

- ‘Hub and spoke management’
- Specialist management birth to adult - overview
- Antenatal and neonatal management
- Outreach nursing
- Comprehensive multidisciplinary management
- Surgery to lip and palate
- Speech development
- Hearing
- Dentofacial development and management
- Alveolar bone grafting
- Orthodontic treatment during adolescence
- Post-surgical facial growth
- Orthognathic Surgery
- Long-term management
- Future developments

### Multidisciplinary care of Craniofacial deformities
